Opinion: Four keys to reaching California conservation goals

30X30 initiative could profoundly transform the Bay Area, making region more resilient to climate change

One year ago, Gov. Gavin Newsom set a bold goal of conserving 30% of land and coastal water in California by 2030. President Biden and other leaders around the world have also established goals to conserve at least 30%. This goal, known as 30×30, could profoundly transform the Bay Area by creating additional parks and open space with more equitable access for all communities, protecting biodiversity and advancing projects that will make the region more resilient to climate change.
Annie Burke is the executive director of TOGETHER Bay Area.
